

acquire

Acquire KD™

Mid-range networked solution, with features designed for interactive kiosk owners and developers

A streamlined version of Acquire that is specifically tailored to producing Interactive Kiosk projects. Similar to our flagship Premier product, a number of features used primarily for Digital Signage are not present to make learning the product easier, and a limit of 3 projects is imposed.

Design

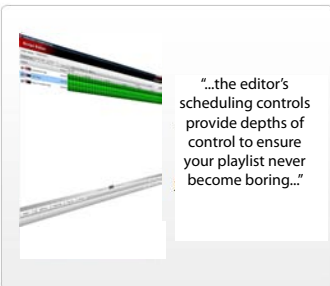

You can build each 'page' from up to 1,024 unique elements with complete control of each one! Unlike some competing products, Acquire is not a rebadged Webbrowser or Powerpoint viewer, Acquire was developed and optimised to show all of the industry standard media formats including MPEG1, 2, 4, DIVx, High Definition (720 and 1080), Quicktime, WMV, Adobe Flash, MP3, WAV and many more.

Acquire KD gives you complete flexibility over the layout of your pages - create your pages freeform using the page designer, which you can then save as a template for re-use. Unlike other systems, you are not restricted to using fixed templates. You can automatically rescale and crop your media and pages for ANY screen resolution, including split-screens, widescreen and even non-standard resolutions such as quad-head graphics card output.

Before you send it to your players, choose a live preview of your content before you upload it to see EXACTLY how it will be played out - not just a web-based simulation.

Schedule

More advanced than competing products, the Editor's scheduling controls provide depths of control to ensure your playlists never become boring, without having a massive team of people to watch over them. Day-parting, week parting, year parting, campaign start and end day/times, external trigger events (e.g. GPS position of the unit, fire alarms, etc), fully automatic (based upon advertising slots or demographics), and multi-tiered schedules enable you to display your content at the most appropriate times to show them for the maximum impact.

"A streamlined version of Acquire that is specifically tailored to producing Interactive Kiosk projects."

Deploy

A choice of transfer technologies are available to you. Our Integrated distribution technology means a single click of the mouse gets your content to where you need it to be, in minutes. Manual deployments can be used to transfer the content using pendrives, CD-ROM, etc, or for locations with a network link using ADSL, Wireless, ISDN or even Dial-up, Acquire includes a push technology (Point2Point™), or use our subscription data transfer network – The PLUS! Data Distribution System automatically and securely uploads your content to the appropriate players in the fastest time possible (Push AND Pull methods available). No more trying to work out which players need which content or using insecure WEB or FTP based access, and full status details of every player in your estate, available instantly!

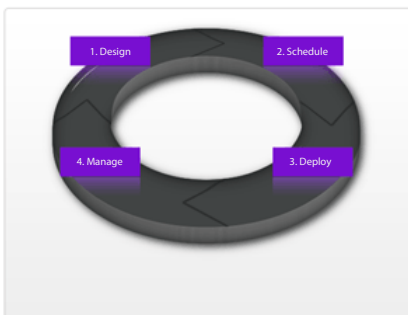

"...Create unique and dynamic content in a reliable and manageable way..."

Manage

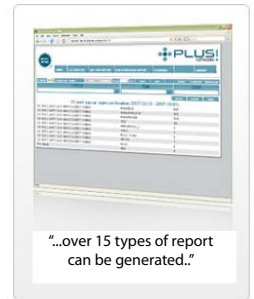

It is important to know what your players are doing. If a player fails to get it's latest content, or even fails completely, you need to know what is happening without having a massive team of support staff. Point2Point users can use the Point2Point application to monitor the players. On a regular basis, the P2P program will 'ping' the players to check that they are operating and playing the content they should. A simple 'traffic light' system shows the state of these at a glance.

PLUS! Users can use the much more advanced Site Manager – a program that provides you with a selection of facilities that are integrated within the PLUS! Network™ services. Primarily a reporting service advises you of events you want to know about (from over 500 triggers, including player failure, over temperature, etc), a historical logging service describes what has happened to the player, and a remote access feature to remotely control the player and resolve any problems.

Report

Local and online post-playout reports - over 15 different types of report can be generated through our web-based report system, including play-out logs, most popular pages, uptime and downtime, and much more!

"...over 15 types of report can be generated."

Acquire KD at a glance

Focus on providing the features that are important to creating Digital Signage solutions.

Up to 5 different projects allow you to create different solutions for different clients, or try new developments before making them live.

Create unique and dynamic content in a reliable and manageable way from a combination of rich media elements.

Automatically rescale and crop your media and pages for ANY screen resolution.

Live previews of your content before you upload it to see EXACTLY how it will be played out - not just a web-based simulation.

Integrated PLUS! Network™ distribution technology means a single click of the mouse gets your content where you need it to be, in minutes. Other distribution methods can also be used, enabling you to manage a network of sites the way you prefer, saving costs and providing the most flexible methods to your clients.

Post-playout reports - over 12 different types of report can be generated.

Integrates with Sentinel, our remote management system (powered by our Kiosk Monitor technology) to secure the player from accidental or malicious damage, and to monitor and remotely support your hardware and software in the field.
