

# PLUS! Network

❖ Much more than just file transfer

The integrated transfer system, PLUS! Network, provides an ultra-secure, resilient distribution technology. Built specifically for the rapid deployment of large amounts of content around the world, it removes the need for expensive satellite distribution, yet provides much more than simple HTTP or FTP transfer.

Fully integrated with the Acquire Digital Signage and Kiosk technology and both the Signage Monitor and Kiosk Monitor services, the PLUS! Network provides you with a fast, secure transfer system, with digital network monitoring and comprehensive content reporting.

With all of the benefits of a broadcast technology such as Satellite, but using any TCP/IP connection (such as ADSL, 3G, EDGE, etc) the PLUS! Network gets your content from your head office, onto the distribution servers which comprise the network. After virus checking and verifying your content, the network delivers the content to all of your players simultaneously via multiple ISPs, datacentres and backbones - as fast as your connection allows. Content DNA matching identifies only relevant content to be transferred, minimising transfer time and maximising throughput.

**“It is critically important that content is delivered on time and that accurate logging of content played is recorded.”**

**“Content DNA matching identifies only relevant content to be transferred”**

**“Automatically and securely uploads digital signage content to the appropriate players in the fastest time possible.”**

# ...PLUS! Network

## Continued

Throughout the transfer and at any time, fully detailed information about the state of your players, the state of the transfers, and historical information about your network are available to help you manage your estate and take action if necessary to resolve problem units (of course, the PLUS! Network automatically recovers the units to the working state once the fault has been remedied, with no further action from you).

Most importantly, the service is GUARANTEED - with our multiple servers handling resilience and redundancy not available through older FTP methods typically found in competing systems, we can guarantee that the service will be available when you need it. These servers are regularly audited by third-party security analysts to ensure nothing untoward happens to your systems.

But the service is much more than that..

We know that to operate a network service you need information at your fingertips. The PLUS! Network provides many other features to make your network operations run smoothly and without the need for large teams of engineers. As well as the intelligent distribution, monitoring, and alerting status information, the PLUS! Network service includes unlimited web-based reporting from your playout logs, automatic software upgrades, live viewing of remote players, automatic recovery of swapped-out players, pull AND push technologies and much more.

## Features

<b>Dynamic DNS Configuration</b>
<b>Automatic updates of time/date</b>
<b>Automatic upgrade to latest software release*</b>
<b>Transfer over any TCP/IP compliant networks (e.g. ADSL, ISDN, 3G, Edge, Satellite)</b>
<b>Email alerts of network status</b>
<b>Content DNA matching identifies only relevant content to be transferred, minimising transfer time and maximising throughput</b>
<b>Instant visibility of the whole network or individual players</b>
<b>Automatic re-integration and update of replaced units</b>
<b>All uploaded content is virus checked and verified</b>
<b>Multi user access accounts with rights management</b>
<b>Full audit trail</b>
<b>Advanced web-based playout reporting service</b>
<b>Notification of deployment or hardware problems</b>
<b>Instant visibility of the status of your network, using a simple 'traffic light' method or through detailed logs</b>
<b>Built in VPN (448-Bit Key Encryption)</b>
<b>Both Push AND Pull technologies available</b>
<b>Remote live viewing of player screens</b>
<b>Seamless integration with Kiosk Monitor and Signage Monitor networks for remote support of players</b>
<b>Intelligent transfer ensures that new units and replacements are automatically brought to the correct state</b>

The PLUS! Network service is a subscription based system, located throughout the world and is always available.

**The PLUS! Network provides the platform for over 3000 digital signs and kiosks worldwide with more devices being added every month. So if you are looking for total control and visibility for your digital network then call us today.**
