

Putting Improved Access in the Picture

Solution

Acquire was responsible for the design and development of the world's first DDA (Disability Discrimination Act) compliant ID photo booth.

Following DDA specifications closely, Acquire's studio partner, Working Solutions, developed the kiosk and software solution to cater specifically for users affected by a variety of disabilities and access issues including visual impairments, hearing difficulties, and wheelchair access. Large push-buttons were used as an alternative to the standard touch screen used in most kiosks, and all 'reach' distances were kept within acceptable limits.

Uniquely, the system automatically found the user's head and presented the best photograph to match the legal passport requirements - even using a lower camera if required to get the best photo. Photos were taken and printed within a minute.

More Information

Acquire Digital is an internationally recognized software brand, firmly established as a provider of cost effective and turnkey digital signage and kiosk software solutions, with more than 18,000 installed players and kiosks worldwide.
